ABOUT US

Height safety for every building

From a single roof anchor on a suburban strata block to a complete access package for a hospital, warehouse or high-rise, iSafe Access designs, installs and certifies height safety systems that are compliant, practical and cost-effective.

We work with a broad range of proven systems from leading manufacturers and suppliers, including Kattsafe, Safetylink, Safety Roof Anchors, Gorter, Skylotec, Beaver Brands, Ferno and 3M. That lets us match the right product to each roof, façade, ceiling space and budget, rather than forcing one system onto every site.

Our approach

ASSESS → DESIGN → INSTALL → TRAIN → INSPECT → MAINTAIN

Why clients choose iSafe Access

- Independent advice and a broad product range, not a single-brand catalogue
- Compliant layout design with clear, fixed quotes
- Installation by our in-house, manufacturer-trained crew
- Certificates, asset registers and annual recertification reminders
- More than 23 years of industry experience across NSW, the East Coast and Canberra

Brands we supply & install

Kattsafe	SafetyLink® Innovative Fall Protection	SAFETY ROOF ANCHORS	Gorter®
SKYLOTEC	BEAVER BRANDS Specialist Safety Brands Wholesaler	FERNO®	3M Science. Applied to Life.™

Other compliant systems are available to suit project specifications and existing installations. Brand names are trademarks of their respective owners.

PRODUCT RANGE

Fall protection systems

Systems that connect workers safely to the structure, for restraint, fall arrest and rope access.

Anchor points
Surface-mount, through-bolt, cast-in and raised anchors for metal roofs, concrete slabs, parapets and façades. Suitable for restraint, fall arrest and rope access, subject to system design.

Static lines
Horizontal lifeline systems that let workers move continuously along roof edges, gutters and plant areas without disconnecting.

Rigid rail
Overhead or wall-mounted rail for façades, plant, loading areas and industrial processes, with trolleys that follow bends and curves.

Ladder fall arrest
Vertical lifelines and rail systems fitted to fixed ladders, giving climbers continuous protection on the way up and down.

Davit bases & arms
Permanent and portable davit systems for rope access, façade maintenance and rescue.

Façade anchors
Ceiling, soffit and wall anchors positioned for window cleaning, glazing and façade inspection drops.

PRODUCT RANGE

Access & edge protection

Collective protection and safe access routes that reduce reliance on harnesses altogether.

Fixed ladders
Compliant fixed and step-type ladders for roofs, plant decks and pits, with fall arrest systems where required.

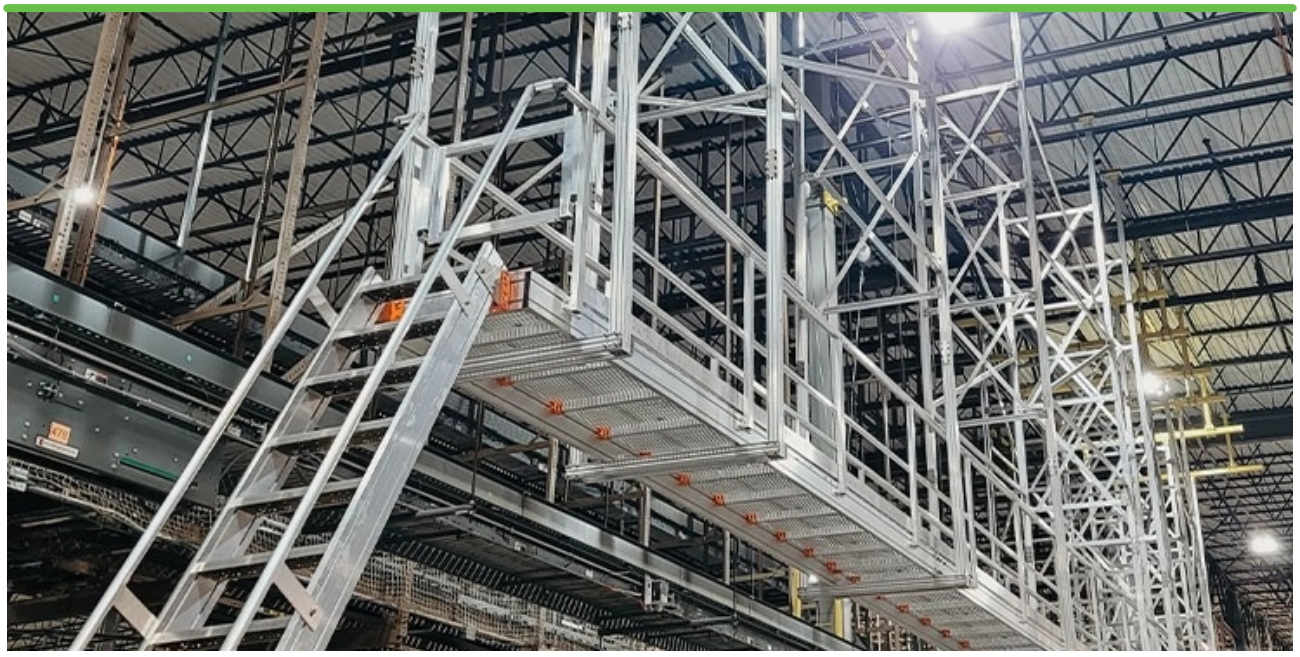

Roof access hatches
Insulated, weather-sealed hatches with assisted opening, sized to suit ladders and equipment access.

Guardrail
Fixed and free-standing (non-penetrating) guardrail for roof edges, skylights, plant areas and hatch openings.

Walkways & platforms
Non-slip roof walkways, crossovers and work platforms that protect the roof sheeting and the people on it.

Stairs & crossovers
Stairways and step-overs for changes in roof level, pipework and services.

Ceiling-space access
Catwalks, gantries and anchors for safe movement through ceiling voids and above suspended ceilings.

APPLICATIONS

Solutions for every building scenario

Every site is different. These are the systems we most often combine for each type of building.

Commercial office
Façade anchors, davits, rigid rail, roof walkways and guardrail for window cleaning and plant access.

Residential & strata
Roof anchors, static lines, access hatches and ladders, plus recertification and roof access manuals.

Industrial & warehouse
Static lines, rigid rail, walkways, skylight protection, guardrail and platforms over machinery.

Retail & shopping centres
Large-area static lines, walkways, guardrail and plant platforms, with minimal disruption to trade.

Education & health
Roof safety systems, ladders and hatches across multiple campuses, with consistent asset registers.

Government & defence
Compliant access for secure sites, with full documentation and inducted crews.

Solar installations
Anchors and static lines placed around arrays, so installers and maintainers stay protected.

Plant & ceiling spaces
Gantries, platforms, stairs and anchors for safe access to services above ceilings.

SERVICES

From audit to annual recertification

A complete service pathway, so you deal with one team for design, installation, documentation and ongoing compliance.

01 Assess
Roof and access audits, hazard identification, photos and measurements.

02 Design & quote
Compliant layout design, product selection and a clear, fixed quote.

03 Install
Installation by our in-house crew, with site inductions and coordination with other trades.

04 Certify
Certificates of installation, asset registers and roof access documentation.

05 Train
Working-at-heights and system-specific induction training for your users.

06 Recertify & maintain
Annual inspections, recertification, PPE inspection, repairs and reminders when due.

One team. Every system. Fully compliant.

COMPLIANCE

Keeping your systems compliant

Height safety equipment must be inspected and maintained to stay in service. We make it simple.

Our installations and inspections are carried out in line with relevant Australian Standards and NSW work health and safety requirements, as applicable to the system and task, including:

AS/NZS 1891.4	**AS/NZS 5532**	**AS/NZS 1891.2**	**AS 1657**	**NSW WHS Regulation 2017**

What our annual inspection includes

- Visual and functional inspection of anchors, lines, rail, ladders, hatches and guardrail
- Load testing where required by the standard or manufacturer
- Compliance tags and an updated asset register
- A clear report with photos and any remedial recommendations
- Reminders before your next inspection falls due

Our team

Our team includes manufacturer-trained installers, competent inspectors and personnel with high-risk work, confined-space, rail, rescue and training competencies. We work across government, health, education, transport, retail, industrial, commercial and residential sites.

KEEPING PEOPLE SAFE.
